Electrical Installation Condition Report

Requirements for Electrical Installations - BS 7671:2018 (IET Wiring Regulations 18th Edition)

Information for recipients:

The purpose of this report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section E). The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section K).

Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section D.

The person ordering the report should have received the Original©Report and the inspector should have retained a duplicate. For items classified in Section K as C1 ("Danger Present"), the safety of those using the installation is at risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.

The Original©Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.

For items classified in Section K as C2 ("Potentially Dangerous"), the safety of those using the installation may be at risk and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

Where the installation incorporates residual current devices (RCDs) there should be a notice at or near the devices stating that they should be tested every 6 months. For safety reasons it is important that these instructions are followed.

Where it has been stated in Section K that an observation requires further investigation code FI the inspection has revealed an apparent deficiency which may result on a code C1 or C2 could not, due to the extent or limitations of this inspection, be fully identified. Such observations should be investigated as soon as possible. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section F).

Section D (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The Inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licencing authority, insurance company, mortgage provider and the like) before the inspection was carried out.

For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons competent in such work. The recommended date by which the next inspection is due is stated in Section F of the report under 'Recommendations' and on label at or near to the consumer unit/distribution board.

BS(EN) 60947-3 No. of Poles 4 Current Rating 100 A Rated time delay N/A ms Measured operating trip time N/A ms
C. Observations Explanation of codes
Referring to the attached schedule of inspection and test results, and subject to the
limitations at Section D. Potentially dangerous. Urgent remedial action required.
No remedial work required Improvement recommended.
The following observations are made
Item No. Observations Code
1 DB - : 5.2 Cables correctly supported throughout their run (521.10.202; 522.8.5) where visible
2 DB - : 5.10 Concealed cables installed in prescribed zones (see Section D. Extent and limitations) (522.6.202) - Only checked where visible
BB - : 5.11 Cables concealed under floors, above ceilings or in walls/partitions, adequately protected against damage (see Section D. Extent and limitations) (522.6.204) -Only checked where visible
4 DB - : 5.15 Cables segregated/separated from communications cabling (528.2) Only checked where visible
5 DB - : 5.16 Cables segregated/separated from non-electrical services (528.3) Only checked where visible
6 6.19 Condition of circuit accessories (651.2) See written report
7 DB Entire Installation : 1.19 RCD(s) provided for additional protection/requirements, where required - includes RCBO(s) (411.3.3; 415.1) - See written report
8 DB Entire Installation : 2.12.3 For cables concealed in walls at a depth of less than 50 mm (522.6.202; 522.6.203)
9 DB Entire Installation : 2.12.4 For cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203)
DB Entire Installation : 2.18 Condition of accessories including socket-outlets, switches and joint boxes (651.2 (v)) - See written report
One of the following codes, as appropriate, has been allocated to each of the observations made above and/or any attached observation sheets to indicate to the person(s) responsible for the installation the degree of urgency for remedial action.
Danger present. Risk of Injury. Immediate remedial action required.
Potentially dangerous. Urgent remedial action required.
Improvement recommended. 6, 7, 8, 9, 10
Further Investigation required without delay

3486000001233

6.1	Identification of conductors (514.3.1)	
6.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	
6.3	Condition of insulation of live parts (416.1)	
6.4	Non-sheathed cables protected by enclosure in conduit, ducting or trunking. Integrity of containment (521.10.1)	
6.5	Suitability of containment systems for continued use (including flexible conduit) (Section 522)	
6.6	Cables correctly terminated in enclosures (Section 526)	
6.7	Confirmation that ALL conductor connections, including connections to busbars, are correctly located in terminals and are tight and secure (526.1)	Ø
6.8	Examination of cables for signs of unacceptable thermal or mechanical damage/deterioration (421.1; 522.6)	Ø
6.9	Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523)	
6.10	Adequacy of protective devices: type and rated current for fault protection (411.3)	
6.11	Presence and adequacy of circuit protective conductors (411.3.1.1; 543.1)	
6.12	Coordination between conductors and overload protective devices (433.1; 533.2.1)	
6.13	Cable installation methods/practices with regard to the type and nature of installation and external influences (Section 522)	
6.14	Where exposed to direct sunlight, cable of a suitable type (522.11.1)	
6.15	Cables concealed under floors, above ceilings, in walls/partitions less than 50 mm from a surface, and in partitions containing metal parts	
6.15.1	Installed in prescribed zones (see Section D. Extent and limitations) (522.6.202) or	MV
6.15.2	Incorporating earthed armour or sheath, or run within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like (see Section D. Extent and limitations) (522.6.204)	M
6.16	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)	
6.17	Band II cables segregated/separated from Band I cables (528.1)	MV
6.18	Cables segregated/separated from non-electrical services (528.3)	MV
6.19	Condition of circuit accessories (651.2)	3
6.20	Suitability of circuit accessories for external influences (512.2)	
6.21	Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)	
6.22	Adequacy of connections, including cpc's, within accessories and to fixed and stationary equipment – identify/record numbers and locations of items inspected (Section 526)	
6.23	Presence, operation and correct location of appropriate devices for isolation and switching (Chapter 46; 537)	
6.24	General condition of wiring systems (651.2)	
6.25	Temperature rating of cable insulation (522.1.1; Table 52.1)

n the outcome column	use the codes above. Prov	vide additional comment w	here appropriate, C1/C2	/C3 and FI coded items to	be recorded in section k	of the condition report.

DB/CU Ref: Entire Installation DB/CU Location: N/A

B/CU Ref:	Entire Installation DB/CU Location: N/A	
em No.	Description	Outcom
O CONSII	MER UNIT/DISTRIBUTION BOARD(S)	
1.1	Adequacy of working space/accessibility to consumer unit/distribution board (132.12; 513.1)	
1.2	Security of fixing (134.1.1)	
1.3	Condition of enclosure(s) in terms of IP rating (Barriers etc) (416.2)	
1.4	Condition of enclosure(s) in terms of fire rating etc (421.1.6; 421.1.201; 526.5)	
1.5	Enclosure/obstacles not damaged/deteriorated so as to impair safety (651.2)	
1.5.1	Presence and effectiveness of obstacles (417.2)	NA NA
1.6	Presence of main linked switch (as required by 462.1.201)	
1.7	Operation of main switch (functional check) (643.10)	
1.8	Manual operation of circuit-breakers and RCD(s) (test button) to prove disconnection (643.10)	
1.9	Correct identification of circuit details and protective devices (514.8.1; 514.9.1)	
1.10	Presence of RCD six-monthly test notice at or near consumer unit/distribution board (514.12.2)	
1.11	Presence of non-standard (mixed) cable colour warning notice at or near equipment, where required (514.14)	
1.12	Presence of alternative supply warning notice at or consumer unit/distribution board (514.15)	NA.
1.13	Presence of other required labelling (Please specify) (Section 514)	
	Compatibility of protective devices, bases and other components; correct type and rating (no signs of unacceptable thermal	Ď
1.14	damage, arcing or overheating) (411.3.2; 411.4; 411.5; 411.6; Sections 432; 433)	
1.15	Single-pole switching or protective devices in line conductors only (132.14.1, 530.3.3)	2
1.16	Protection against mechanical damage where cables enter consumer unit/distribution board (132.14.1; 522.8.1; 522.8.5; 522.8.11)	9
1.17	Protection against electromagnetic effects where cables enter ferromagnetic enclosures (521.5.1)	
1.18	RCD(s) provided for fault protection - includes RCBO(s)(411.4.204; 411.5.2; 531.2)	
1.19	RCD(s) provided for additional protection/requirements, where required - includes RCBO(s) (411.3.3; 415.1)	•
1.20	Confirmation of indication that SPD is functional (651.4)	(N/A
1.21	Confirmation that ALL conductor connections, including connections to the busbars are correctly located in terminals and are tight and secure (526.1)	2
1.22	Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6)	N/A
1.23	Adequate arrangements where a generating set operates in parallel with the public supply (551.7)	(NA
FINAL (CIRCUITS	
2.1	Identification of conductors (514.3.1)	
2.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	
2.3	Condition of insulation of live parts (416.1)	
2.4	Non-sheathed cables protected by enclosure in conduit, ducting or trunking. (521.10.1)	
2.4.1	To include the integrity of conduit and trunking systems (metallic and plastic)	
2.5	Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523)	
2.6	Coordination between conductors and overload protective devices (433.1; 533.2.1)	
2.7	Adequacy of protective devices: type and rated current for fault protection (411.3)	
2.8	Presence and adequacy of circuit protective conductors (411.3.1; Section 543)	Q
2.9	Wiring system(s) appropriate for the type and nature of the installation and external influences (Section 522)	Q
2.10	Connected cables installed in prescribed zones (see Section D. Extent and limitations) (522.6.202)	
2.11	Cables concealed under floors, above ceilings or in walls/partitions, adequately protected against damage (522.6.204)	Q
2.12	Provision of additional requirements for protection by RCD not exceeding 30 mA:	
2.12.1	For all socket-outlets of rating 32 A or less unless exempt (4.11.3.3)	
2.12.2	For the supply of Mobile equipment not exceeding 32 A rating for use outdoors (411.3.3)	
2.12.3	For cables concealed in walls at a depth of less than 50 mm (522.6.202; 522.6.203)	•
2.12.4	For cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203)	G
2.12.5	For circuits supplying luminaires within domestic (household) premises (411.3.4)	NA NA
2.13	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)	
2.14	Band II cables segregated/separated from Band I cables (528.1)	
2.15	Cables segregated/separated from communications cabling (528.2)	
2.16	Cables segregated/separated from non-electrical services (528.3)	
2.17	Termination of cables at enclosures - indicate extent of sampling in section d of the report (section 526)	

ELECTRICAL INSTALLATION CONDITION REPORT - DB Inspection Schedule

for Industrial/Commercial Premises

Requirements for Electrical Installations BS7671:2018 (IET Wiring Regulations 18th Edition)

3486000001233

2.17	7.2 No basic	nsulation of a conductor visible outside encl	losure	(526.8	5)			
2.17	7.3 Connection	ons of live conductors adequately enclosed ((526.5)				
2.17	7.4 Adequate	ly connected at point of entry to enclosure (g	glands	, bushe	es etc.) (522.8	.5)
