ELECTRICAL INSTALLATION CONDITION REPORT Requirements For Electrical Installations - BS 7671

N/A

10

years

2023-0486 Certificate Number:

DETAILS OF THE PERSON ORDERING THE REPORT

Client: WESSEX RECA

MOUNT HOUSE, MOUNT STREET, TAUNTON, TA1 3QE Address:

REASON FOR PRODUCING THIS REPORT

Reason for producing this report:

SAFETY ASSESSMENT REQUESTED BY THE CLIENT TO ASCERTAIN THE "IN SERVICE" CONDITION OF THE ELECTRICAL INSTALLATION IN LINE WITH THE ELECTRICAL SAFETY STANDARDS.

Date on which inspection and testing was carried out:

04/07/2023

DETAILS OF THE INSTALLATION WHICH IS THE SUBJECT OF THIS REPORT

ACF HUT, UPPER, OATES ROAD, HELSTON, CORNWALL, TR13 8AW Installation Address:

N/A Description of premises: Domestic Commercial Industrial N/A Other:

20+ years Estimated age of wiring system:

Evidence of additions/ Yes if yes, estimated age: alterations:

N/A Installation records available? (Regulation 651.1) Nο Date of last inspection:

EXTENT AND LIMITATIONS OF INSPECTION AND TESTING

Extent of the electrical installation covered by this report:

FIXED INSTALLATION AT THE ABOVE ADDRESS INCLUDING 80% SAMPLES OF ACCESSORIES, 100% DISTRIBUTION BOARDS EARTHING/PROTECTIVE BONDING CONDUCTORS AND FINAL DISTRIBUTION CIRCUITS IN ACCORDANCE WITH ITEM 3.8 OF GUIDANCE NOTES 3

Agreed limitations including the reasons (see Regulation 653.2):

CHARACTERISTICS OF PRIMARY OVERCURRENT DEVICE AS UNABLE TO WITHDRAW AT TIME OF TEST

ALL ZS READINGS WERE CALCULATED USING THE ZS AT THE D/B WITH THE R1+R2 READINGS OBTAINED TO LIMIT THE TIME OF LIVE WORKING.

THERE ARE SOME LIMITATIONS ON THE INSULATION RESISTANCE TESTING DUE TO VOLTAGE SENSITIVE LOADS ATTACHED WHICH COULD NOY BE REMOVED AT THE TIME OF TESTING

CLIENT Agreed with:

Operational limitations including the reasons:

The inspection and testing detailed in this report and accompanying schedules have been carried out in accordance with BS 7671:2018 (IET Wiring Regulations) as amended to 2022.

It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspected unless specifically agreed between the client and inspector prior to the inspection. An inspection should be made within an accessible roof space housing other electrical equipment.

SUMMARY OF THE CONDITION OF THE INSTALLATION

See page 3 for a summary of the general condition of the installation in terms of electrical safety.

Overall assessment of the installation in terms of it's suitability for continued use*:

UNSATISFACTORY

* An unsatisfactory assessment indicates that dangerous (Code C1) and/or potentially dangerous (Code C2) conditions have been identified.

RECOMMENDATIONS

Where the overall assessment of the suitability of the installation for continued use on page 1 is stated as 'UNSATISFACTORY', I/We recommend that any observations classified as 'Code 1 - Danger Present' or 'Code 2 - Potentially dangerous' are acted upon as a matter of urgency.

Investigation without delay is recommended for observations identified as 'FI - Further Investigation Required'.

Observations classified as 'Code 3 - Improvement recommended' should be given due consideration.

Subject to the necessary remedial action being taken, I/we recommend that

the installation is further inspected and tested by:

5 Years or change of tenant/owner

Note: The proposed date for the next inspection should take into consideration the frequency and quality of maintenance that the installation can reasonably be expected to receive during its intended life. The period should be agreed between relevant parties.

OBSERVATIONS AND RECOMMENDATIONS FOR ACTIONS TO BE TAKEN.

Referring to the attached schedules of inspection and test results, and subject to the limitations specified on page 1 of this report under 'Extent of the Installation and Limitations of Inspection and Testing':

N/A There are no items adversely affecting electrical safety

or

/

The following observations and recommendations are made

Item No	Observations	Classification Code
1	THE INCOMMING SUPPLY CONCENTRIC CABLE HAS EXPOSED SINGLE INSULATED CABLE WHERE IT ENTERS THE OLD PORCELEAN CUT OUT FUSE HOLDER.	C2
2	THE INCOMING SUPPLY NEUTRAL FROM THE SUPPLY CABLE IS BARE COPPER NO INSULATION WHERE IT ENTERS AN OLD HENLY BLOCK CHANCE OF EXPOSED LIVE PARTS IN THE EVENT OF AN OPEN NEUTRAL AT THE SUPPLY TRANSFORMER	C2
3	THE MAIN EARTH TO THE PIN CONNECTION HAS NO MECHANICAL PROTECTION OR UV PROTECTION	C2
4	COVER TO THE PIN CONNECTION MISSING	C3
5	THE ZS ON THE PIN WAS TOO HIGH GREATER THAN 200 OHMES	C2
6	CCT9 NO RING CONTINUITY ON ANY CABLE L,N,CPC FURTHER INVESTIGATION REQUIRED	C2
7	CCT 13 1.5mm CABLE ON A 16A MCB TOO LARGE FOR THE SIZE OF THE CABLE AND INSTALLATION METHOD	C2
8	CCT14 1.0mm CABLE ON 10A MCB TOO LARGE FOR THE SIZE OF THE CABLE AND INSTALLATION METHOD	C2
9	THE D/B IS OF PLASTIC CONSTRUCTION AND DOES NOT MEET THE LATEST FIRE REGS BUT WAS FITTED AT AN EARLIER EDITION OF BS 7671	C3
10	THE MAIN BOND TO THE WATER IS NOT CONNECTED WITHIN 600mm OF THE INCOMING POSITION BUT IS A SOUND CONNECTION AND IS VISIBLE SOLID COPPER TO THIS POINT	С3
11	THERE IS NO SURGE PROTECTION FITTED TO THE PROPERTY	C3
12	THERE ARE USB SOCKETS FITTED IN THE PROPERTY AND SOME OTHER DC LOADS ATTACHED, THE RCDS ARE ALL AC TYPE BUT UPON TESTING THERE WAS NO SIGNES OF DC BLINDING	C3

One of the following codes, as appropria	te, has been allocated	to each of the o	bservations made	above to indi	cate to the p	erson(s)
responsible for the installation the degre	e of urgency for reme	dial action.				

'	9			
	Potentially dar Urgent remedial required		C3 Improvement recommended	FI Further investigation required without delay
mmediate remedial action required	I for items:	N/A		
Jrgent remedial action required for	items:	1, 2, 3, 5, 6,	7, 8	

Improvement recommended for items: 4, 9, 10, 11, 12

Further investigation required for items: N/A

ELECTRICAL INSTALLATION CONDITION REPORT GUIDANCE FOR RECIPIENTS

(to be appended to the Report)

This Report is an important and valuable document which should be retained for future reference.

- 1. The purpose of this Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section 5). The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section 7).
- 2. This Report is only valid if accompanied by the Inspection Schedule(s) and the Schedule(s) of Circuit Details and Test Results
- 3. The person ordering the Report should have received the 'original' Report and the inspector should have retained a duplicate.
- 4. The original Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.
- 5. Section 4 (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.
- 6. Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section 4.
- 7. For items classified in Section 7 as CI (Danger present), the safety of those using the installation is at risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.
- 8. For items classified in Section 7 as C2 (Potentially dangerous), the safety of those using the installation at risk and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.
- 9. Where it has been stated in Section 7 that an observation requires further investigation (code FI) the inspection has revealed an apparent deficiency which may result in a code CI or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section 7).
- 10. For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in Section 7 of the Report under Recommendations.
- 11. Where the installation includes a residual current device (RCD) it should be tested six-monthly by pressing the button marked 'T' or 'Test'. The device should switch off the supply and should then be switched on to restore the supply. If the device does not switch off the supply when the button is pressed, seek expert advice. For safety reasons it is important that this instruction is followed.
- 12. Where the installation includes an arc fault detection device (AFDD) having a manual test facility it should. be tested six-monthly by pressing the test button. Where an AFDD has both a test button and automatic test function, manufacturer's instructions shall be followed with respect to test button operation.
- 13. Where the installation includes a surge protective device (SPD) the status indicator should be checked to confirm it is in operational condition in accordance with manufacturer's information. If the indication shows that the device is not operational, seek expert advice. For safety reasons it is important that this instruction is followed.
- 14. Where the installation includes alternative or additional sources of supply, warning notices should be found at the origin or meter position or, if remote from the origin, at the consumer unit or distribution board and at all points of isolation of all sources of supply.
